

Need to turn paper documents... into searchable documents on your PC?

With an integrated document management solution from Muratec and SmartSearch you can utilize your workgroup printer to easily convert paper documents into digital files that can be quickly retrieved from your PC.

How does it work?

- Insert a document into your Muratec MFP and select [ScanTag]
- Enter the document indexing information, as set by the administrator, and select [Start]. (At this point you are finished)
- The Muratec MFP will scan the document(s) and ScanTag will deliver the document information to a network folder where it is captured by SmartSearch.
- SmartSearch will index the document based on the information you entered.
- You can then access SmartSearch from your PC to retrieve documents on-demand.

Key Benefits:

- Save money and desk space by utilizing your workgroup printer as a scanning resource
- 80-sheet automatic document feeder and legal-size platen glass enable you to scan virtually any type of color and/or monochrome document
- User-friendly hardware and software enables users to scan and retrieve documents with ease
- Improve customer service (instant access to records)
- Insure regulatory compliance and document retention policy adoption by deploying convenient, easy-to-use scanning solutions
- Easily create workflow processes that increase document processing efficiency
- Create a central repository for document sharing, collaboration and security
- SmartSearch is a scalable document management solution that can grow as your requirements change

DEPLOY. DUPLICATE. DIGITIZE. DELIVER.
